How to Open or Display the On-Screen Keyboard

1. Open StarBoard software, and click “StarBoard” at the bottom of the tool bar.

2. Click “Mode” from the submenu of “StarBoard”
3. Click "Accessories" from the submenu of "Mode".

- **PC screen**: allows you to move back to window desktop every time when you click on it, and use stylish pen as an annotation device.
- **Video input**: allows you to hook up a digital camcorder and use it with the system.
- **Accessories**: provide special functions for the StarBoard.
- **Print**: allows you to print the objects that are already in the StarBoard.
- **Recently used item**: allows you to access the buttons or command that you used recently.

4. Click "On-Screen Keyboard".

Educational Technology
York College / CUNY
• **Add/delete external applications**: allows you to take the third party application and consolidate into the StarBoard system. For example, you can add a software application on your local computer into the StarBoard system.

• **ScreenBlock**: allows you to selectively expose part of the slide.

• **ScreenCapture**: consists of three buttons. You can choose from capture entire desktop or screen as shown on monitor. You can capture only a window that you are operating. You can also capture specific area on the screen.

• **Spotlight**: allows you to emphasize the important portion of a slide. You can change the size, and the brightness of the spotlight.

• **Stopwatch/timer**: helps you to track the time during a meeting or an exam.

5. You will see the On-Screen keyboard on the screen.
